HELELAIKSUS 1..9 palli, 2006

KOKKUVÕTE

2006.a iseloomustab kõrge küpsetuskvaliteet ja keskmine saagitase.

- 1. Kasvas keskmine saak – sordilehe sortide keskmisena pisut üle 4 t/ha. Kasvuaeg jäi juulikuise põua tõttu lühikeseks ja see mõjutaski saagitaset.**
- 2. Samadel põhjustel jäi ka suvinisu tera peenikeseks.**
- 3. Proteiini- ja kleepevalgu sisaldused olid 11 viimase aasta kõige kõrgemad**

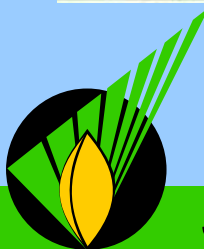

KOKKUVÕTE

4. Langemisarvud olid samuti 11 aasta kõrgeimad.
5. Haigused suuremat kahju ei põhjustanud.

Täname !
